

```
public class Observable {
    List observers; int state;

    changeState(int state) {
        this.state = state;
        notifyObservers();
    }

    register(Observer observer){
        observers.add(observer);
    }

    notifyObservers(){
        for (Observer observer : observers) {
            observer.update();
        }
    }
}
```
