

```
public class FormChain {  
    public main () {  
        var add = new Add()  
        var sub = new Sub()  
        var mul = new Mult()  
        var div = new Div()  
  
        add.nextChain(sub)  
        sub.nextChain(mult)  
        mult.nextChain(div)  
  
        add.calculate(5,3, "mult")  
    }  
}
```

```
public class Add {  
    var next  
    void nextChain(nextInChain) {  
        next = nextInChain  
    }  
  
    int calculate(x, y, operation) {  
        if("add" == operation) {  
            return x + y  
        } else {  
            next.calculate(x,y,operation)  
        }  
    }  
}
```
